## Credit Hour Explanation

| Program credit hour requirements |  | A) Number of credit hours in current program (Quarter credit hours) | B) Calculated result for 2/3rds of current (Semester credit hours) | C) Number of credit hours required for proposed program (Semester credit hours) | D) Change in credit hours |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Total minimum credit hours required for completion of program |  | 86 | 57.3 | 57 | 0.3 |
| Required credit hours offered by the unit | Minimum | 40 | 26.7 | 29 | 2.3 |
|  | Maximum | 64 | 42.7 | 45 | 2.3 |
| Required credit hours offered outside of the unit | Minimum | 0 | 0.0 | 0 | 0.0 |
|  | Maximum | 45 | 30.0 | 26 | 4.0 |
| Required prerequisite credit hours not included above | Minimum | 46 | 30.7 | 28 | 2.7 |
|  | Maximum | 49 | 32.7 | 28 | 4.7 |

Explain any change in credit hours if the difference is more than 4 semester credit hours between the values listed in columns $\mathbf{B}$ and $\mathbf{C}$ for any row in the above table
There is a small decrease in the maximum amount of required prerequisite hours from 32.7 to 28 . One change here is the reduction in hours for the CSE prereq from 2.7 semester hours under quarters to 2 semester hours. Also, we reduced the amount of required upper division prerequisite hours in Math in our advanced Physics option. These students usually have the best Math preparation, and we would rather let them decide which Math courses to use to complement their Physics training. The advanced Physics option now has 9 credit hours that the students can use to devote toward free electives.

## Program Learning Goals

Note: these are required for all undergraduate degree programs and majors now, and will be required for all graduate and professional degree programs in 2012. Nonetheless, all programs are encouraged to complete these now.

Program Learning Goals - Undergraduate Physics majors acquire a basic mastery of fundamental areas of physics, from classical mechanics, through electricity and magnetism, and finally to modern physics including quantum mechanics and relativity.

- Undergraduate Physics majors develop powerful analytical and problem solving skills in areas involving both physics and mathematics.
- Undergraduate Physics majors acquire a basic mastery of experimental physics.
- Undergraduate Physics majors acquire a basic mastery of data reduction and error analysis.
- Undergraduate Physics majors effectively communicate their physical understanding both professionally and colloquially (orally and in writing).
- Undergraduate majors are apprised of and encouraged to participate in academic research, industrial research and/or outreach activities which are consistent with their interest, ability and postgraduate plans.
- Undergraduate majors acquire expertise relevant to their chosen program option.

## Assessment

Assessment plan includes student learning goals, how those goals are evaluated, and how the information collected is used to improve student learning. An assessment plan is required for undergraduate majors and degrees. Graduate and professional degree programs are encouraged to complete this now, but will not be required to do so until 2012.

Is this a degree program (undergraduate, graduate, or professional) or major proposal? Yes
Does the degree program or major have an assessment plan on file with the university Office of Academic Affairs? Yes
Summarize how the program's current quarter-based assessment practices will be modified, if necessary, to fit the semester calendar.
For our assessment, we use a variety of direct and indirect methods, none of which depend upon whether the program is run under quarters or semesters. As a result, we do not anticipate any changes to our assessment practices under the semester system.

## Program Specializations/Sub-Plans

If you do not specify a program specialization/sub-plan it will be assumed you are submitting this program for all program specializations/sub-plans.

Program Specialization/Sub-Plan Name

## Program Specialization/Sub-Plan Name

Program Specialization/Sub-Plan Goals

Program Specialization/Sub-Plan Name Program Specialization/Sub-Plan Goals

Applied Physics (New)

- This is a flexible program that combines a strong foundation in physics with a set of technical electives designed for those with special interests.
- The program of technical electives could include courses of study from other sciences such as Astronomy, or other programs such as engineering, meteorology, economics, history of science, or primary education.

Physics and Life Sciences (New)

- This option is designed for those intending to attend medical school. It satisfies typical medical school admission requirements, when combined with the required physics and prerequisite math courses in the physics core curriculum.

Physics Teaching (New)

- This option is designed for those seeking secondary level certification in physics (i.e., to be a high school teacher). It is been designed to satisfy College of Education Master of Education (Physics Certification) curriculum.

Advanced Physics (New)

- This program is designed for those intending graduate level (Ph.D.) studies in physics. It provides an excellent preparation for graduate school in physics.

## Pre-Major

Does this Program have a Pre-Major? No

## Dear Larry:

It is a pleasure to forward to you the proposal for the BS major in Physics under semesters. The major has been modified from its present quarter version mainly by reduction of the number of tracks offered and by the splitting of upper division courses in quantum mechanics and electromagnetic field theory into honors and nonhonors versions to better meet the needs of the students. It is a solid proposal, well conceived.

Beyond my own review of the documents, the proposal has been discussed by colleagues from other NMS units at meetings on October 13 and 20, 2010, and the Sciences Subcommittee of the Arts and Sciences CCI. Feedback from these discussions has been incorporated in the proposal.

If you have any questions, I would be happy to address them.
Sincerely,

David Andereck
Professor of Physics
Associate Dean of Natural and Mathematical Sciences, College of Arts and Sciences

To: Office of Academic Affairs
From: James J. Beatty, Chair, Department of Physics
Date: August 19, 2010

Re: Semester Program Proposal for Undergraduate Physics Major

The Physics department has the following programs which will be converted from quarters to semesters:

1) The Undergraduate Engineering Physics Major
2) The Undergraduate Physics Major
3) The Undergraduate Physics Minor
4) The Combined Physics BS/MS
5) The Graduate Physics PhD

The subject of this proposal is the Undergraduate Physics Major; the other programs will be addressed in separate proposals.

The Undergraduate Studies Committee of the Department of Physics has worked hard to produce this proposal, describing the conversion of our current Undergraduate Major in Physics from the quarter system to the semester system.

The contents of this proposal have been discussed at length in a variety of Undergraduate Studies Committee meeting as well as faculty meetings through the 2009-2010 academic year. A preliminary version of the proposal was presented and discussed in a "Town Meeting" with undergraduate Physics and Engineering Physics majors on April 15, 2010. Based on their comments, a revised proposal was unanimously approved in a meeting of the Undergraduate Studies Committee on April 20,2010. This version was then circulated for faculty review and comments, with a vote on the proposal completed on April 30 . The outcome of the vote was 44 in favor, o opposed.

## Rationale for Changes to the Undergraduate Physics Major Program

The changes to the physics major program can be summarized as follows:
A. We have gone from a system of 6 options labeled A through F, to a system of 4 Specializations in which the names are more closely tied to the expected outcome for the student. Each of these specializations leads to a Bachelor of Sciences degree in physics. The specializations each consist of a common core of Physics, Math and prerequisite courses, along with additional required and/or recommended courses in Physics, Math, and/or other departments.
i) The Advanced Physics Specialization for grad school bound students (formerly Option A). This specialization is designed for those intending graduate level (Ph.D.) studies in physics. It provides an excellent preparation for graduate school in physics
ii) The Physics and Life Sciences Specialization for premed students (formerly Option D). This specialization is designed for those intending to attend medical school. It satisfies all of the OSU medical school admission requirements, when combined with the required physics and math courses in the physics core curriculum.
iii) The Physics Teaching Specialization for teaching high school physics (formerly Option E). This specialization is designed for those seeking secondary level certification in physics (i.e., to be a high school teacher). It is been designed to satisfy College of Education Master of Education (Physics Certification) curriculum.
iv) The Applied Physics Specialization for students interested in Engineering, Law, Journalism, other Sciences, etc. (formerly Options B,C,F). This specialization is a flexible program that combines a strong foundation in physics with a set of technical electives designed for those with special interests. The program of technical electives could include courses of study from other programs in the Colleges of Mathematical and Physical Sciences such as Astronomy, or the Engineering College, or other programs such as meteorology, economics, history of science, or primary education.
B. We have included an Honors track for two of our upper division Physics sequences. This will reduce the overall class size for the two required subject areas of Quantum Mechanics and Electricity\&Magnetism, as well as providing a challenging option for students who are academically more prepared.
C. We now require 3 upper division lab courses. Previously, only the Option A (now Advanced Physics) students were required to take 3 labs. Since lab experience is potentially even more useful for students who will seek employment immediately after graduation (which is true of most of the students in the other options) this should positively impact their employment prospects.
D. We include the 3rd writing course material in our Advanced Lab. The new GE template no long has a 3rd writing requirement, and yet presentation of data results and analysis is an important educational goal for our students. However, there has been for some time a presentation and writing component to our advanced lab, and this change will be formalized under semesters.

The date of the last significant revision to the Physics Major program was in 1998.

Physics Major Option (A,B,C,D,E,F)

Signature of advisor
Date

Students who began their degree under quarters will not be penalized as we move to semesters, either in terms of progress towards their degree or their expected date of graduation. Transition plans are currently being developed for students who will be at a variety of different stages (one year towards degree, two years, etc.). We do not at present see a need for bridge courses in Physics for any students who are beyond the introductory (i.e. first year) Physics classes. However, bridge courses (1-2 credit semester hours) in Mathematical Methods in Physics are being considered for Physics majors who may be somewhat behind in math preparation due to the transition. Bridge courses will be available for students who have completed part of the 3quarter introductory sequence in either of our service courses in Physics (i.e Physics 111-2-3 or 131-2-3). The bridge courses will be offered during the summer prior and first year after the transition. They may be offered the 2nd year after the transition.

To address the details of how students who have credits under both semesters and quarters will graduate, we have implemented a "Quarters to Semesters Transition Advising Worksheet", which will be filled out for every physics major who will graduate with physics courses accumulated under both quarters and semesters.. The basic strategy is to combine credit hours accumulated under quarters, semesters, or both, in broad categories. The credit hours under quarters are weighted by 0.67 , summed with semester hours for that same category, and compared to a minimum for that category. In addition, minima are defined for overall hours summed among groups of categories. The minima are chosen so that students are not penalized for course sequences taken partially under quarters and completed under semesters, while ensuring that the requirements of the program are still met.

This worksheet will be filled out for every Physics Major as part of the requirements for Physics 295 (or Physics 2095 under semesters), a course all Physics majors take in the first quarter (or first semester) of their second (sophomore) year in the Physics program. Students who are in Physics 295 in Autumn 2010 are the first group of students expected to graduate under semesters, and we have devoted approximately $20 \%$ of our available class time to discussing the semester transition alone. We are confident that this individual attention to every physics major who will graduate under semesters will ensure a smooth transition from quarters to semesters.

As an added help, we have put together a website available for students which has both a description of the changes involved in moving from quarters to semesters, as well as sample plans for the majority of our students. The sample plans include examples for students with the following mix of years under quarters and semesters: (3Q1S, meaning 3 Quarters and 1 Semester), (2Q2S), (1Q3S), and of course (0Q4S). The website is:
http://www.physics.ohio-state.edu/undergrad/majorSemesters.php

We have 1 full time staff member and 1 faculty member who are charged with providing advising to all Physics majors. Sample transition plans for all students will made made up by the first quarter (or semester) of their second year in the program (usually the sophomore year), and kept on file. As long as students stick to these plans we do not anticipate any impediment to their graduation date. Students will be encouraged to seek advising help if they change their plans in any significant way.

## Undergraduate Physics Major Program Supplemental Material

The following pages contain supplemental material for the conversion of the Undergraduate Physics Major from quarters two semesters:

1. (1 page) An example curriculum plan for a student who spends their first 2 years in the Physics major under quarters, and the final two years under semesters.
2. (4 pages) For this same student, the result of the "Quarters to Semesters Transition Advising Worksheet" which helps the student and advisor confirm that the student has satisfied the program requirements.
3. (4 pages) There are then 4 sample semester plans, one for each of the 4 options we will have for the Physics Major under semesters.

Advanced Physics specialization: This specialization is designed for those intending graduate level (Ph.D.) studies in physics. It provides an excellent preparation for graduate school in physics. Assumes 2 years under quarters and 2 years under semesters.

Advanced Physics specialization: This specialization is designed for those intending graduate level (Ph.D.) studies in physics. It provides an excellent preparation for graduate school in physics.

Applied Physics specialization: This specialization is a flexible program that combines a strong foundation in physics with a set of technical electives designed for those with special interests. The program of technical electives could include courses of study from other programs in the Colleges of Mathematical and Physical Sciences, or Engineering, or other programs such as meteorology, economics, history of science, or primary education. Courses utilized in pursuit of a minor, additional major, or dual degree are acceptable and encouraged. A minimum of $\mathbf{1 5}$ semester credit hours is required.

GEC: We assume there are 11 GEC category requirements that physics majors will have to satisfy, beyond those satisfied as part of their major. These are: 2 writing, 1 bio, 1 Lit, 1 Arts 1 Hist, 2 Soc, 1 Cult or Hist, 2 Open (we use upper division Math for this), plus Language. Language is a 34 -credit hour courses under semesters. Majors will be encouraged to seek input from Arts and Sciences Advisors to ensure they satisfy GEC requirements.

Physics and Life Sciences specialization: This specialization is designed for those intending to attend medical school. It satisfies all of the OSU medical school admission requirements, when combined with the required physics and math courses in the physics core curriculum.

|  |  | Courses in BLUE can only be scheduled by Robin Wyatt (wyatt.60@osu.edu) |  |  |  |  |
|  |  | Courses in YELLOW are only offered in the quarter/semester shown. |  |  |  |  |

GEC: We assume there are 11 GEC category requirements that physics majors will have to satisfy, beyond those satisfied as part of their major. These are: 2 writing, 1 bio, 1 Lit, 1 Arts 1 Hist, 2 Soc, 1 Cult or Hist, 2 Open (we use upper division Math for this), plus Language. Language is a 3 4-credit hour courses under semesters. Majors will be encouraged to seek input from Arts and Sciences Advisors to ensure they satisfy GEC requirements.

Physics teaching specialization: This specialization is designed for those seeking secondary level certification in physics (i.e., to be a high school teacher). It is intended to satisfy College of Education Master of Education (Physics Certification) curriculum.
