Richard,

The Physics minor semesters proposal was reviewed today by the Arts and Sciences CCI. They have requested a small change in the table that lists courses available for the minor. The heading of the second section of courses in the table is Physics Courses Which Could Be Used to Satisfy the Physics Minor. This section of the table includes the two required courses, 2300 and 2095. You could simply add an asterisk, with a footnote that these are required, or separate those two courses into a different section of the table below the prereq section.

I just noticed that the Math courses have the wrong numbers, both in this table and in the advising sheet. We have already discussed this with respect to revising the major program proposal, so when the minor is sent back you could correct these as well.

Thanks,

Dave
