Learning Goal	1	Undergraduate Physics minors are introduced to the fundamental areas of physics, from classical mechanics, through electricity and magnetism, and finally to modern physics including quantum mechanics and relativity.						
	2	Undergraduate Physics minors are exposed to powerful analytical and problem solving techniques in areas involving both physics and mathematics.						
	3	Undergraduate Physics minors are introduced to experimental physics at the intermediate level.						
	4	Undergraduate Physics minors acquire training in at least one area of physics at the intermediate level or beyond.

Transition policy for the Physics Minor

Students who began their degree under quarters will not be penalized as we move to semesters, either in terms of progress towards their degree or their expected date of graduation. Transition plans are currently being developed for students who will be at a variety of different stages (one year towards degree, two years, etc.). We do not at present see a need for bridge courses in Physics for any students who are beyond the introductory (i.e. first year) Physics classes. However, bridge courses (1-2 credit semester hours) in Mathematical Methods in Physics are being considered for Physics majors who may be somewhat behind in math preparation due to the transition. Bridge courses will be available for students who have completed part of the 3-quarter introductory sequence in either of our service courses in Physics (i.e Physics 111-2-3 or 131-2-3). The bridge courses will be offered during the summer prior and first year after the transition. They may be offered the 2nd year after the transition.

To address the details of how students who have credits under both semesters and quarters will graduate, we have implemented a "Quarters to Semesters Transition Advising Worksheet", which will be filled out for any physics major who will graduate with physics courses accumulated under both quarters and semesters.. The basic strategy is to combine credit hours accumulated under quarters, semesters, or both, in broad categories. The credit hours under quarters are weighted by 0.67, summed with semester hours for that same category, and compared to a minimum for that category. In addition, minima are defined for overall hours summed among groups of categories. The minima are chosen so that students are not penalized for course sequences taken partially under quarters and completed under semesters, while ensuring that the requirements of the program are still met. This worksheet will be filled out for every Physics Minor as part of the requirements for Physics 295 (or Physics 2095 under semesters), a course all Physics minors take. Students who are in Physics 295 in Autumn 2010 are the first group of students expected to graduate under semesters.
