From: Neil J. Andrew, Chairman *NJA*
Academic Affairs Committee
School of Environment and Natural Resources

Subject: GS 411 – Course Concurrence

Date: April 26, 2006

There was some course content overlap between this proposed course and our ENR 355 Water Quality course. The SENR committee recommended that the instructors meet to determine and confirm how much duplication existed between these courses.

That discussion was held on April 18, 2006. It was productive and mutually beneficial. These two courses are now much more complementary for this very important topic. The SENR commends Geological Sciences for their cooperation and interest to enhance course offerings for water resources.

The SENR is pleased to support GS 411 – Water Security for the 21st Century. On behalf of the SENR Director, please be advised that the Academic Affairs Committee provides full concurrence for this amended course.
