

23 August 2023

To Whom It May Concern:

The Center for Life Sciences Education respectfully submits the attached proposal for an additional fourth Specialization to the Biology Major Program, the *Integrated General Biology Specialization*. The current three specializations are all titled to reflect very focused career paths: *Pre-Health Professions*, *Life Sciences Education*, and *Forensic Biology*. Both direct and indirect student feedback has been clear that we need a more generalized pathway for students who are not intending to pursue careers in these three areas. In some cases students want to pursue a General Biology degree to prepare them for career paths not covered by the existing specializations, while some students seek to switch to a General Biology program after deciding not to pursue professional studies. For these latter students, the lack of a General Biology option is often cited as a reason for leaving the Biology major entirely.

Despite the names of the existing specializations, one of the hallmarks of the Biology Major is its overall flexibility. The *Integrated General Biology Specialization* being proposed does not fundamentally change the course choices afforded to students in the Major but provides a more prescribed pathway for students who seek a broad understanding of our diverse discipline. This specialization would suit students looking to pursue graduate school, industry, or agency positions after graduation. An important priority for the new specialization is to help students find a home in the life sciences should they decide to switch out of one of the other specializations, improving retention in the major.

We look forward to the Committees' review and welcome any questions or concerns.

Sincerely,

Harold Fisk, PhD

Interim Director, Center for Life Sciences Education

# Proposal to Create an *Integrated General Biology Specialization* for the Biology Major Program

## Rationale

The Bachelor of Science and Bachelor of Arts Biology Major Programs use a *Specialization* structure in which students must choose one of three current transcribed specializations to follow. Each specialization is aligned to the Biology Program Outcomes but makes use of the very flexible options allowed by the Major to create an individually-tailored pathway to guide students toward their desired career goals. The current specializations include *Pre-Health Professions* (PHP), *Life Sciences Education* (LSE), and *Forensic Biology* (FB). Approximately 80% of Biology Majors choose the PHP specialization, often with the goal of progressing to a health-related professional school (i.e., Medical, Dental, Optometry, Veterinary, etc.). In practice we know that only a small subset of students will earn the competitive admission to one of the professional schools, and students often tell our academic advisors upon deciding to change career plans that they do no longer want to complete the PHP Specialization or have a 'pre-health' designation. Such students feel constrained and frequently do not know what to do with the PHP specialization if they aren't intending to go to a professional school. Without a clear path to other non-health fields students often leave the Major entirely. At OSU, only slightly more than half of students who matriculate as Biology Majors are retained in STEM majors two years later. For minoritized students, that number is closer to 40%. The lack of clear or desirable alternative options to the PHP Specialization is often cited by students as a reason for leaving the major.

In order to provide a more general pathway for students interested broadly in the life sciences, we propose the creation of a fourth Biology Major Specialization (BS & BA) called the *Integrated General Biology Specialization (IGB)* to be implemented for the **Autumn 2024 semester**. The pathway will be flexible enough both for students who wish to direct enroll as well as those wishing to pivot away from one of the other more directed specializations. The breadth of content in this specialization will provide a pathway for students to apply to graduate school, as well as find research, agency, or industry positions. As proposed, the IGB specialization continues to offer the elective flexibility that is a hallmark of the other specializations while still providing a structure that ensures the program outcomes are met.

Each of the three current specializations share the same GE, Supporting Course, and Core Course structure (page 1 of the Advising Sheet, shown as Figures 1 and 3 below), though the supporting course requirements are differentiated by the BS and BA plans respectively. The proposed Integrated General Biology Specialization would have these same requirements as their respective existing BS and BA counterparts. Page two of the advising sheets (Figures 2 and 4 below) contains the specialization-specific requirements, which would be identical for both the BS and BA plans. Those advising sheets follow on the next pages and a four year course plan is laid out in *Appendix A*. For comparison, the advising sheets for the existing three specializations can be found in *Appendices B-G*.

<b>TOTAL BioSci HOURS</b>		<b>TOTAL SEMESTER UNITS</b>	
---------------------------	--	-----------------------------	--

**Notes:**

- Core, specialization, and elective courses must total 32 semester units, and must include three laboratory courses.
- At least 25 of the 32 semester units must be courses in Biochemistry, Biology, EEOB, Microbiology, or Molecular Genetics, and courses outside these departments must be pre-approved by a Biology advisor.
- The two advanced electives must be courses in Biochemistry, Biology, EEOB, Microbiology, or Molecular Genetics. Courses outside these departments must be pre-approved by a Biology advisor.
- Other electives must be at the 2000 level or above, except for Biology which must be at the 3000 level or above.
- Up to 3 credit hours of research, individual study, or internship may be counted toward the major and, with approval of a major advisor, may be counted as a laboratory course.
- Transfer credit allowed - no more than one half of the credit hours required on the major.
- Honors versions of courses substitute freely.

## Biology Program Goals and Outcomes

### BA outcomes

Goal 1: Explain major biological concepts and discuss how these are connected with various areas of the biological and physical sciences.

- 1.1. Describe the hierarchical relationship between structure and function at all levels: molecular, cellular, and organismic.
- 1.2. Diagram, explain, and contrast the major cellular processes in Archaea, bacteria, and eukaryotes.
- 1.3. Differentiate types of biological macromolecules and compare their contributions to cellular structure and function.
- 1.4. Apply the principles of genetics and describe the flow of genetic information.
- 1.5. Explain changes in organisms through time by applying the principles of evolutionary biology.
- 1.6. Demonstrate how relationships among living things are understood through taxonomy and phylogenetic analysis.
- 1.7. Describe ecological relationships between organisms and their environment.

Goal 2: Demonstrate problem solving, analytical, and communication skills that will provide the foundation for lifelong learning and career development.

- 2.1. Apply the scientific process, including designing and conducting experiments and testing hypotheses.
- 2.2. Use laboratory equipment, employ safe laboratory practices, and adapt tools such as laboratory notebooks and spreadsheets to organize and analyze data associated with scientific processes.
- 2.3. Retrieve information from the life sciences literature; read, understand, and critically review scientific papers.
- 2.4. Prepare oral and written reports following a recognized scientific format.
- 2.5. Develop an awareness of the careers and professions that rely on knowledge of biological sciences.

Goal 3: Value biology as an integral part of society and everyday life.

- 3.1. Demonstrate at least one of the following skills with regard to biology and society: communication, argumentation, social responsibility, ethics, and/or cultural competency.

### BS outcomes

Goal 1: Explain major biological concepts and discuss how these are connected with various areas of the biological and physical sciences.

- 1.1. Describe the hierarchical relationship between structure and function at all levels: molecular, cellular, and organismic.
- 1.2. Diagram, explain, and contrast the major cellular processes in Archaea, bacteria, and eukaryotes.
- 1.3. Differentiate types of biological macromolecules and compare their contributions to cellular structure and function.
- 1.4. Apply the principles of genetics and describe the flow of genetic information.

1.5. Explain changes in organisms through time by applying the principles of evolutionary biology.

1.6. Demonstrate how relationships among living things are understood through taxonomy and phylogenetic analysis.

1.7. Describe ecological relationships between organisms and their environment.

Goal 2: Apply concepts from mathematics and other science disciplines for the analysis of processes in living organisms.

2.1. Apply quantitative skills in the analysis of biological processes.

2.2. Apply concepts from chemistry in the analysis of biological processes.

2.3. Apply concepts from physics in the analysis of biological processes.

Goal 3: Demonstrate problem solving, analytical, and communication skills that will provide the foundation for lifelong learning and career development.

3.1. Apply the scientific process, including designing and conducting experiments and testing hypotheses.

3.2. Use laboratory equipment, employ safe laboratory practices, and adapt tools such as laboratory notebooks and spreadsheets to organize and analyze data associated with scientific processes.

3.3. Retrieve information from the life sciences literature; read, understand, and critically review scientific papers.

3.4. Prepare oral and written reports following a recognized scientific format.

3.5. Develop an awareness of the careers and professions that rely on knowledge of biological sciences.

Goal 4: Value biology as an integral part of society and everyday life.

Our selections for the six required major courses reflect alignment to these outcomes, ensuring students following this specialization will minimally receive intermediate level instruction in each of the outcomes as shown in the curriculum map below (see *Appendix H* for BS and *Appendix I* for BA). The three laboratory course requirement will ensure sufficient instruction in the skills areas. The two upper-level elective choices give students the freedom of course choice that is a hallmark of the Biology Major broadly. The overlap of the required courses in IGB when compared with the other specializations allows us to move forward without need to adjust the curriculum map, nor will it significantly impact our assessment planning or course operations. Both regional campuses offering the Biology Major currently, Lima and Marion, not only have the course offerings to meet the IGB requirements but have expressed great enthusiasm at the prospect of having a second specialization they can offer students. Both currently have course offerings sufficient only to offer the PHP specialization.

The breadth of the life sciences at Ohio State gives our students unique opportunities compared to other institutions. For many programs, a general Biology pathway may be all that is available due to limited course selection, or if there are options they would typically fall into a General Biology and sub-discipline specific majors such as Molecular Genetics or Biochemistry. Our students benefit from having six sub-disciplinary majors to choose from in addition to the Biology Major, and while Biology has three specializations, there is no “general biology” pathway for students to choose, unlike most other colleges and universities. The breadth of content

*required* of this specialization compared to our existing pathways will provide students with better exposure to the diversity of the life sciences and in doing so will give students a greater opportunity to explore and, hopefully, find the right future path for them while retaining students in the Major. It is worth noting that this proposed specialization is not groundbreaking in structure. Students could already choose most of these same courses required of IGB as electives in the existing specializations. The value of the IGB Specialization is that it provides a clear pathway for students who do not wish to be designated pre-health, education, or forensic biology-bound in their careers but want a better-rounded course plan in the life sciences.

We anticipate that the majority of Biology Major Students will continue to opt for the Pre-Health Professions Specialization, so the overall number of students enrolled in the IGB is likely to be a small proportion of Biology Majors. However, we do anticipate that the addition of this specialization will help retain students in the Biology major. Given that our current retention numbers suggest a student roster that is in substantial flux the effect of the IGB specialization on retention is not anticipated to have a significant impact on our advising services.

#### Required Supporting Courses (48-54 credit hours)

##### Biology (2 courses)

- Biology 1113.01 (4) or 1113.02 (5)\*
- Biology 1114.01 (4) or 1114.02 (5)\*
- \_\_\_\_\_ Substitution

\* Can be used to fulfill the GEN Foundation: Natural Sciences requirement

##### Mathematics/Statistics (2 courses)

- Math 1151 or 1156 (5)\*\*
- Math 1152 (5) or Stat 2480 (3) or Stat 2450 (3)
- \_\_\_\_\_ Substitution

\*\* Can be used to fulfill the GEN Foundation; MQRM requirement

##### Physics (2 Courses)

- Physics 1200 (alg) or 1250 (calc) (5)
- Physics 1201 (alg) or 1251 (calc) (5)
- \_\_\_\_\_ Substitution

##### Chemistry (2 courses)

- Chemistry 1206 (3) and 1208 (4) or 1210 or 1610 or 1910H (5)
- Chemistry 1220 or 1620 or 1920H (5)
- \_\_\_\_\_ Substitution

##### Organic Chemistry (2 lectures + 2 labs)

- Chemistry 2510 or 2610 or 2910H (4) – Lecture 1
- Chemistry 2520 or 2620 or 2920H (4) – Lecture 2
- Chemistry 2540 or 2940H (2) – Lab 1
- Chemistry 2550 or 2950H (2) – Lab 2
- \_\_\_\_\_ Substitution

#### Core Course (4 credit hours)

- Biology 3401 (4) – *Integrated Biology*

† Courses within the major with a laboratory component

**Biology Major Checklist  
Bachelor of Science  
Pre-Health Professions Specialization**

**Pre-Health Professions Specialization (15-25 credit hours)**

**Required**

- MolGen 4500 (3) or 4606 (4)

**Additional Coursework (at least 4)**

- Biochem 4511 (4), or 5613 AND 5614 (6)
- EEOB 3310 or 3310.01 or 3310.02† (4) – *Evolution*
- Micro 4000† or 4000.01† or 4000.02† (4) or 4100 (5)
- EEOB 3510 or MolGen 4700 or MolGen 5607 or MolGen 5608 (3) – *Cell Biology*
- EEOB 3520† (3) – *Microscopic Anatomy / Histology*
- Anatomy 2300.01† (4) or 3300.01† (5) or EEOB 2510† (3) – *Human Anatomy*
- EEOB 4510† (3) – *Comparative Vertebrate Anatomy*
- Physio 3200 (5) or EEOB 2520 (3) – *Human Physiology* or EEOB 4520 (3) *Comparative Physiology*
- EEOB 3270 (3) or 3320 (3) or 3410 (4) or 3420 (4) or 4240 (3) – *Ecology*

**Electives**

**Embedded Literacies (no additional credit hours)**

| <input type="checkbox"/> Advanced Writing        | Biology 3401 |
| <input type="checkbox"/> Advanced Data Analytics | Biology 3401 |
| <input type="checkbox"/> Technology Literacy     | Biology 3401 |

**TOTAL BioSci HOURS**

**TOTAL SEMESTER UNITS**

**Notes:**

- Core, specialization, and elective courses must total 32 semester units, and must include three laboratory courses.
- At least 25 of the 32 semester units must be courses in Biochemistry, Biology, EEOB, Microbiology, or Molecular Genetics, and courses outside these departments must be pre-approved by a Biology advisor.
- Electives must be at the 2000 level or above, except for Biology which must be at the 3000 level or above.
- Up to 3 credit hours of research, individual study, or internship may be counted toward the major and, with approval of a major advisor, may be counted as a laboratory course.
- Transfer credit allowed - no more than one half of the credit hours required on the major.
- Honors versions of courses substitute freely.

- Anthro 5644 (3) – *Forensic Anthropology*
- BioChem 5615 (3) – *Biochemistry and Molecular Biology III*
- MolGen 5601† (3-4) – *Eukaryotic Molecular Genetics Lab*
- MolGen 5607 (3) – *Cell Biology*
- MolGen 5701 (3) – *DNA Transactions and Gene Regulation*
- Micro 4000† or 4000.01† or 4000.02† (4) or 4100 (5)
- MolGen 4591S or equiv. (1) – *DNA Fingerprinting Workshop in Columbus Public Schools*

**Electives**

**Embedded Literacies (no additional credit hours)**

- |  |              |
|--|--------------|
| <input type="checkbox"/> Advanced Writing        | Biology 3401 |
| <input type="checkbox"/> Advanced Data Analytics | Biology 3401 |
| <input type="checkbox"/> Technology Literacy     | Biology 3401 |

**TOTAL BioSci HOURS**

**TOTAL SEMESTER UNITS**

**Notes:**

- Core, specialization, and elective courses must total 32 semester units, and must include three laboratory courses.
- At least 25 of the 32 semester units must be courses in Biochemistry, Biology, EEOB, Microbiology, or Molecular Genetics, and courses outside these departments must be pre-approved by a Biology advisor. At most 7 credit hours from Anthropology may be counted toward the Biology major.
- Electives must be at the 2000 level or above, except for Biology which must be at the 3000 level or above.
- Up to 3 credit hours of research, individual study, or internship may be counted toward the major and, with approval of a major advisor, may be counted as a laboratory course.
- Transfer credit allowed - no more than one half of the credit hours required on the major.
- Honors versions of courses substitute freely.

† Courses within the major with a laboratory component

## Biology Major Checklist Bachelor of Arts Forensic Biology Specialization

NAME \_\_\_\_\_  
SEMESTER OF GRADUATION \_\_\_\_\_

DATE \_\_\_\_\_

### General Education Requirements (32-39 credit hours)

- |  |            |
|--|------------|
| <input type="checkbox"/> GE Launch Seminar (1)                                   | GENED 1201 |
| <input type="checkbox"/> Foundations: Writing and Information Literacy (3)       | _____      |
| <input type="checkbox"/> Foundations: Mathematics & Quantitative Reasoning (3-5) | _____      |
| <input type="checkbox"/> Foundations: Literacy, Visual & performing Arts (3)     | _____      |
| <input type="checkbox"/> Foundations: Historical & Cultural Studies (3)          | _____      |
| <input type="checkbox"/> Foundations: Natural Sciences (4-5)                     | _____      |
| <input type="checkbox"/> Foundations: Social & Behavioral Sciences (3)           | _____      |
| <input type="checkbox"/> Foundations: Race, Ethnicity and Gender Diversity (3)   | _____      |
| <input type="checkbox"/> Theme: Citizenship for a Diverse & Just World (4-6)     | _____      |
| <input type="checkbox"/> Theme: Student Choice (4-6)                             | _____      |
| <input type="checkbox"/> GE Reflection (1)                                       | GENED 4001 |

### Required Arts & Sciences Courses (1-13 Credit Hours)

- |   |       |
|---|-------|
| <input type="checkbox"/> Arts & Sciences Survey (1) | _____ |
| <input type="checkbox"/> World Language (0-12)      | _____ |

### Required Supporting Courses (32-46 credit hours)

#### Biology (2 courses)

- Biology 1113.01 (4) or 1113.02 (5)\*
- Biology 1114.01 (4) or 1114.02 (5)\*
- \_\_\_\_\_ Substitution

\* Can be used to fulfill the GEN Foundation: Natural Sciences requirement

#### Mathematics/Statistics

- Math 1148 (4)\*\* – *College Algebra* AND Math 1149 (3) – *Trigonometry*, OR Math 1150 (5)\*\* – *Pre-Calculus*
- \_\_\_\_\_ Substitution

\*\* Can be used to fulfill the GEN Foundation: MQRN requirement

#### Physics (1 Course)

- Physics 1200 (alg) or 1250 (calc) (5)
- \_\_\_\_\_ Substitution

#### Chemistry (2 courses)

- Chemistry 1206 (3) AND 1208 (4) or 1210 or 1610 or 1910H (5)
- Chemistry 1220 or 1620 or 1920H (5)
- \_\_\_\_\_ Substitution

#### Organic Chemistry

- Chemistry 2310 (4) OR 2510 AND 2520 (8) OR 2510 AND 2540 (6)
- \_\_\_\_\_ Substitution
- Waived

#### Anthropology (1 course)

- Anthro 2200 (4) (optional, necessary for Anthro prereqs)

### Core Course (4 credit hours)

- Biology 3401 (4) – *Integrated Biology*

**Biology Major Checklist  
Bachelor of Arts  
Forensic Biology Specialization**

**Forensic Biology Specialization (14-22 credit hours)**

**Required**

- Biochem 4511 (4), or 5613 AND 5614 (6)
- MolGen 4500 (3) or 4606 (4)

**Additional Coursework (at least 3)\*\*\***

- Anthro 5607 (3) – *Human Osteology*
- Anthro 5608 (3) – *Skeletal Biology*
- Anthro 5609 (3) – *Dental Anthropology*
- Anthro 5610 (3) – *Bioarchaeology*
- Anthro 5644 (3) – *Forensic Anthropology*
- BioChem 5615 (3) – *Biochemistry and Molecular Biology III*
- MolGen 5601† (3-4) – *Eukaryotic Molecular Genetics Lab*
- MolGen 5607 (3) – *Cell Biology*
- MolGen 5701 (3) – *DNA Transactions and Gene Regulation*
- Micro 4000† or 4000.01† or 4000.02† (4) or 4100 (5)
- MolGen 4591S or equiv. (1) – *DNA Fingerprinting Workshop in Columbus Public Schools*

**Electives**

**Embedded Literacies (no additional credit hours)**

- |  |              |
|--|--------------|
| <input type="checkbox"/> Advanced Writing        | Biology 3401 |
| <input type="checkbox"/> Advanced Data Analytics | Biology 3401 |
| <input type="checkbox"/> Technology Literacy     | Biology 3401 |

**TOTAL BioSci HOURS**

**TOTAL SEMESTER UNITS**

**Notes:**

#### \* Full text of program learning goals:

- 1.1 Describe the hierarchical relationship between structure and function at all levels: molecular, cellular, and organismic.
- 1.2 Diagram, explain, and contrast the major cellular processes in Archaea, bacteria, and eukaryotes.
- 1.3 Differentiate types of biological macromolecules and compare their contributions to cellular structure and function.
- 1.4 Apply the principles of genetics and describe the flow of genetic information.
- 1.5 Explain changes in organisms through time by applying the principles of evolutionary biology.
- 1.6 Demonstrate how relationships among living things are understood through taxonomy and phylogenetic analysis.
- 1.7 Describe ecological relationships between organisms and their environment.
- 2.1 Apply the scientific process, including designing and conducting experiments and testing hypotheses.  
Use laboratory equipment, employ safe laboratory practices, and adapt tools such as laboratory notebooks and spreadsheets to organize and analyze
- 2.2 data associated with scientific processes.
- 2.3 Retrieve information from the life sciences literature; read, understand, and critically review scientific papers.
- 2.4 Prepare oral and written reports following a recognized scientific format.
- 2.5 Develop an awareness of the careers and professions that rely on knowledge of biological sciences.
- 3.1 Integrate biological knowledge in discussions of society and everyday life
