
Term Information

Effective Term Spring 2026

General Information

Course Bulletin Listing/Subject Area	Evol, Ecology & Organismal Bio
Fiscal Unit/Academic Org	Evolution, Ecology & Org Bio - D0390
College/Academic Group	Arts and Sciences
Level/Career	Undergraduate
Course Number/Catalog	3610
Course Title	Evolutionary Genomics
Transcript Abbreviation	Evol Genomics
Course Description	An introduction to core principles of the modeling and investigation of biological data using quantitative models applied to genomic and other data. The course focuses on applications of quantitative modeling methods to study of the evolution and ecology to natural populations of animals, plants, and fungi.
Semester Credit Hours/Units	Fixed: 3

Offering Information

Length Of Course	14 Week
Flexibly Scheduled Course	Never
Does any section of this course have a distance education component?	No
Grading Basis	Letter Grade
Repeatable	No
Course Components	Lecture
Grade Roster Component	Lecture
Credit Available by Exam	No
Admission Condition Course	No
Off Campus	Never
Campus of Offering	Columbus

Prerequisites and Exclusions

Prerequisites/Corequisites	Recommend a working knowledge of molecular genetics, inheritance genetics, and basic statistics. No specific course is required as a formal prerequisite.
Exclusions	
Electronically Enforced	No

Cross-Listings

Cross-Listings

Subject/CIP Code

Subject/CIP Code	26.0701
Subsidy Level	Baccalaureate Course
Intended Rank	Sophomore, Junior, Senior

Requirement/Elective Designation

The course is an elective (for this or other units) or is a service course for other units

Course Details

Course goals or learning objectives/outcomes

- (1) understand the conceptual foundations, quantitative models, and experimental approaches in genomic analysis of questions related to evolution, ecology, and biodiversity, (2) be able to read and understand evolutionary genomics journal articles.

Content Topic List

- DNA/RNA sequencing and genome assembly; alignment; genome-wide association studies; homology and sequence databases; BLAST; population genetic diversity; phylogenetic inference; biodiversity databases and trait reconstruction; AI/machine learning.

Sought Concurrence

Yes

THE OHIO STATE UNIVERSITY

Department of Evolution, Ecology, and Organismal Biology
The Ohio State University

EEOB 3610 -- Evolutionary Genomics

In-person Course
3 Credit Hours
Two 80-minute meetings

Instructor

Dr. James B. Pease, Ph.D. (he/him)
Associate Professor
Department of Evolution, Ecology, and Organismal Biology
pease.25@osu.edu
Office: Aronoff 420

Office hours will be set within the first two weeks of class meetings.
For individual meetings, please email ahead of time.

Dr. James Pease conducts his research in evolutionary genomics exploring the evolution of genomes in a variety of plant and animal systems. His research focuses on the integration of genomic sequence data and gene expression profiles to study complex traits in natural populations to further understand the evolutionary history of various plant and animal groups and the trait and environmental contexts of their evolution.

Prerequisites

Recommend a working knowledge of molecular genetics, inheritance genetics, and basic statistics. No specific course is required as a formal prerequisite.

This course is designed to be accessible both to students of biology interested in learning genomic quantitative analysis and students of informatics and statistical modeling interested in learning biological applications. Basics of each of these topics will be covered within the course as needed, but recommend that students have a background in at least one of these areas as pre-existing academic frames of reference. Basic understanding of statistical methods is assumed.

Note: This is a conceptual course and does not assume, nor will students be expected learn, computer programming or terminal-based command line applications.

Course Objectives

Genomics and Bioinformatics (EEOB 3194) will introduce students to core principles of the modeling and investigation of biological data using quantitative models. The course will cover DNA sequencing, various applications of sequencing analysis, population genetic and phylogenetic analysis of genomic data, analysis of gene expression, integration of genomic data with collection, traits, and environmental databases, and machine learning and artificial intelligence approaches to analysis of biological data and images. The focus of this course will be applications of quantitative modeling methods to study of the evolution and ecology to natural populations of animals, plants, and fungi. For each topic, we will determine how biological data are encoded for quantitative analysis, how the analyses are conducted, and then how to interpret the results in a biological context.

Meetings for this course will be interactive lecture-discussions and hands-on exercises. Assessments will consist of short assignments to practice conceptual thinking, experimental design, data interpretation, which will reinforce readings and meeting discussions and practice for the tests. Three non-cumulative tests will each test topics from one-third of the course. The third test will be taken during the final exam period but is not cumulative.

Learning Objectives

By the end of this course students are expected to: (1) demonstrate understanding of the conceptual foundations, quantitative models, and experimental approaches in genomic analysis of questions related to evolution, ecology, and biodiversity, (2) demonstrate an ability to read evolutionary genomics journal articles and determine the primary goals of the study, evaluate experimental outcomes, and identify potential errors and assumptions, and (3) propose experimental designs conceptually that will address practical questions in research in evolution, population biology, and biodiversity. Hands-on exercises will emphasize conceptual understanding, practical data acquisition, and analysis techniques. *Note: Computer programming or scripting will not be expected in this course.*

Materials Needed

Most lectures will be drawn on the board, with some slides to supplement. Slides will be provided on Carmen LMS after the lecture. A notebook is recommended over a laptop for taking notes. However, students should also bring a laptop computer or tablet device capable of internet browsing for the hands-on tutorials.

Readings

Readings will consist of journal articles accessed through the OSU Libraries, or other texts provided by the instructor. Approximately 1-2 short readings will accompany each lecture. Readings will be provided through links or posted files on Carmen LMS. The readings will be

Course Schedule

Course Schedule: Supply schedule of events; include discussion topics, exam dates, assignments, and readings to be completed for each day.

Lecture(s)	Topic
1	Introduction: Pattern to Process in Biological Modeling
2	DNA/RNA Extraction and High-throughput Sequencing
3 & 4	Genome Assembly and Quality Assessment
5	Genome Alignment and Allele Calling
6	Heritability and Gene-Trait-Environment connections and interactions
7 & 8	Genome-wide Association Studies
9	TEST 1 (covers topics 1-8, 8 lectures)
10	Homology and Sequence Databases
11	Sequence Alignment and BLAST
12	Population Genetic Diversity and Eco-Evolutionary Processes
13	Phylogenetic Inference
14	Collections and Environmental Databases and Phylogenetic Trait Reconstruction
15	AI/Machine Learning 1: Quantitative Data and Classifiers
16	AI/Machine Learning 2: Imageomics and Neural Networks
17	AI/Machine Learning 3: Paper Discussion
18	TEST 2 (covers topics 10-17, 8 lectures)
19	RNA-Seq and Differential Gene Expression
20	Pathways and Gene Functional Analysis
21	Student-Selected Journal Article Discussion
22	Protein Structure
23	Peak Finding, Protein Binding Sites, and Epigenetic Markers
24	Metabolomics
25	Student-Selected Journal Article Discussion
26	Student-Selected Journal Article Discussion
27	Student-Selected Journal Article Discussion
28	Student-Selected Journal Article Discussion
FE	TEST 3 (covers topics 19-28, 10 lectures)

Assessment

Attendance: Attendance is expected at all course meetings and attendance will be recorded. Regular participation in discussions is to your benefit and strongly encouraged but not required or assessed. *Note: Attendance no lower 80% is expected and earns full participation credit. Not earning participation credit means the final grade is reduced by one step on the letter scale (e.g., A- to B+).*

Short Assignments: Students will complete short assignments answering questions relating to assigned readings and the lecture discussions. These will be due weekly and cover the previous week's material. The short assignments will be graded Completed/Redo. "Redo" graded assignments need to be completed and resubmitted. *Note: All Short Assignments must be Completed to earn a passing grade in the course. Turning in more than 3 Short Assignments late*

will cause your final grade to be reduced one step on the letter scale (e.g., A- to B+).

Tests: Tests will consist of questions of a variety of formats (mostly short answer reflections) and test the learning objectives of data and analysis interpretation and experimental design. Tests will only cover topics discussed in the lecture or those from the readings specifically mentioned by the instructor. Tests will be taken in-class on paper. The tests will not be cumulative for the specific topics discussed in previous course sections, but concepts will build and integrate throughout the semester.

Tests will be graded on the following holistic scale (not a points-based scale)

Test Grade	Standard of Achievement
A	Consistently strong understanding and synthesis of ideas demonstrated.
A-	Clear understanding demonstrated in most areas and strong synthesis
B+	Strong understanding demonstrated with consistency.
B	Satisfactory understanding demonstrated.
C/D	Unsatisfactory understanding demonstrated in several areas.
E	Consistently unsatisfactory understanding demonstrated.

Assessment component weightings:

Test 1: 31 %

Test 2: 31%

Test 3: 31%

Participation 7%

Course Grade

Course grades are determined using the rubric below (not on a percentage scale):

Course Grade	Minimum Required Test Grades
A	Two A Tests and one Test B or better
A-	Two A- Tests and one Test B or better
B+	Two B+ Tests and one Test C/D or better
B	Three B Tests
B-	Two B Tests and one Test C/D or better
C	One B Test and two Tests C/D or better
D	Two C/D Tests
E	Two E Tests

A non-passing course grade of “E” may also be earned due to (1) any Short Assignments not marked “Completed,” or (2) substantial unexplained non-attendance.

Course Policies

Absences: Attendance of greater than 80% is expected. If a student expects to be or is unexpectedly going to be absent for more than 20% of course meetings, please consult with the instructor. If you are sick with an airborne transmissible illness, please do not attend the class meeting or take appropriate precautions to protect your fellow students. Absences for tests are only allowed for emergencies or other situations as described by Faculty Rule 3335-9-21.

University Policies

Academic Misconduct

Academic integrity is essential to maintaining an environment that fosters excellence in teaching, research, and other educational and scholarly activities. Thus, The Ohio State University and the Committee on Academic Misconduct (COAM) expect that all students have read and understand the University's Code of Student Conduct, and that all students will complete all academic and scholarly assignments with fairness and honesty. Students must recognize that failure to follow the rules and guidelines established in the University's Code of Student Conduct and this syllabus may constitute Academic Misconduct.

The Ohio State University's Code of Student Conduct (Section 3335-23-04) defines academic misconduct as: Any activity that tends to compromise the academic integrity of the University or subvert the educational process. Examples of academic misconduct include (but are not limited to) plagiarism, collusion (unauthorized collaboration), copying the work of another student, and possession of unauthorized materials during an examination. Ignorance of the University's Code of Student Conduct is never considered an excuse for academic misconduct, so please review the Code of Student Conduct and, specifically, the sections dealing with academic misconduct.

If an instructor suspects that a student has committed academic misconduct in this course, the instructor is obligated by University Rules to report those suspicions to the Committee on Academic Misconduct. If COAM determines that a student violated the University's Code of Student Conduct (i.e., committed academic misconduct), the sanctions for the misconduct could include a failing grade in the course and suspension or dismissal from the University.

If students have questions about the above policy or what constitutes academic misconduct in this course, they should contact the instructor.

Artificial Intelligence and Academic Integrity

There has been a significant increase in the popularity and availability of a variety of generative artificial intelligence (AI) tools, including ChatGPT, Sudowrite, and others. These tools will help shape the future of work, research and technology, but when used in the wrong way, they can stand in conflict with academic integrity at Ohio State.

All students have important obligations under the Code of Student Conduct to complete all academic and scholarly activities with fairness and honesty. Our professional students also have the responsibility to uphold the professional and ethical standards found in their respective academic honor codes. Specifically, students are not to use unauthorized assistance in the laboratory, on field work, in scholarship, or on a course assignment unless such assistance has been authorized specifically by the course instructor. In addition, students are not to submit their work without acknowledging any word-for-word use and/or paraphrasing of writing, ideas or other work that is not your own. These requirements apply to all students undergraduate, graduate, and professional.

To maintain a culture of integrity and respect, these generative AI tools should not be used in the completion of course assignments unless an instructor for a given course specifically authorizes their use. Some instructors may approve of using generative AI tools in the academic setting for specific goals. However, these tools should be used only with the explicit and clear permission of each individual instructor, and then only in the ways allowed by the instructor.

Religious Accommodations

Ohio State has had a longstanding practice of making reasonable academic accommodations for students' religious beliefs and practices in accordance with applicable law. In 2023, Ohio State updated its practice to align with new state legislation. Under this new provision, students must be in early communication with their instructors regarding any known accommodation requests for religious beliefs and practices, providing notice of specific dates for which they request alternative accommodations within 14 days after the first instructional day of the course. Instructors in turn shall not question the sincerity of a student's religious or spiritual belief system in reviewing such requests and shall keep requests for accommodations confidential.

With sufficient notice, instructors will provide students with reasonable alternative accommodations with regard to examinations and other academic requirements with respect to students' sincerely held religious beliefs and practices by allowing up to three absences each semester for the student to attend or participate in religious activities. Examples of religious accommodations can include, but are not limited to, rescheduling an exam, altering the time of a student's presentation, allowing make-up assignments to substitute for missed class work, or flexibility in due dates or research responsibilities. If concerns arise about a requested accommodation, instructors are to consult their tenure initiating unit head for assistance.

A student's request for time off shall be provided if the student's sincerely held religious belief or practice severely affects the student's ability to take an exam or meet an academic requirement and the student has notified their instructor, in writing during the first 14 days after the course begins, of the date of each absence. Although students are required to provide notice within the first 14 days after a course begins, instructors are strongly encouraged to work with the student

to provide a reasonable accommodation if a request is made outside the notice period. A student may not be penalized for an absence approved under this policy.

If students have questions or disputes related to academic accommodations, they should contact their course instructor, and then their department or college office. For questions or to report discrimination or harassment based on religion, individuals should contact the Civil Rights Compliance Office.

Policy: Religious Holidays, Holy Days and Observances (<https://oaa.osu.edu/resources/policies-and-procedures/religious-holidays-holy-days-and-observances>)

Disability Statement (with Accommodations for Illness)

The university strives to maintain a healthy and accessible environment to support student learning in and out of the classroom. If students anticipate or experience academic barriers based on a disability (including mental health and medical conditions, whether chronic or temporary), they should let their instructor know immediately so that they can privately discuss options. Students do not need to disclose specific information about a disability to faculty. To establish reasonable accommodations, students may be asked to register with Student Life Disability Services (see below for campus-specific contact information). After registration, students should make arrangements with their instructors as soon as possible to discuss your accommodations so that accommodations may be implemented in a timely fashion.

If students are ill and need to miss class, including if they are staying home and away from others while experiencing symptoms of viral infection or fever, they should let their instructor know immediately. In cases where illness interacts with an underlying medical condition, please consult with Student Life Disability Services to request reasonable accommodations.

slds@osu.edu

Intellectual Diversity

Ohio State is committed to fostering a culture of open inquiry and intellectual diversity within the classroom. This course will cover a range of information and may include discussions or debates about controversial issues, beliefs, or policies. Any such discussions and debates are intended to support understanding of the approved curriculum and relevant course objectives rather than promote any specific point of view. Students will be assessed on principles applicable to the field of study and the content covered in the course. Preparing students for citizenship

includes helping them develop critical thinking skills that will allow them to reach their own conclusions regarding complex or controversial matters.

Grievances and Solving Problems

According to University Policies, if you have a problem with this class, you should seek to resolve the grievance concerning a grade or academic practice by speaking first with the instructor or professor. Then, if necessary, take your case to the department chairperson, college dean or associate dean, and to the provost, in that order. Specific procedures are outlined in Faculty Rule 3335-8-23. Grievances against graduate, research, and teaching assistants should be submitted first to the supervising instructor, then to the chairperson of the assistant's department.

Creating an Environment Free from Harassment, Discrimination, and Sexual Misconduct

The Ohio State University is committed to building and maintaining a welcoming community. All Buckeyes have the right to be free from harassment, discrimination, and sexual misconduct. Ohio State does not discriminate on the basis of age, ancestry, color, disability, ethnicity, gender, gender identity or expression, genetic information, HIV/AIDS status, military status, national origin, pregnancy (childbirth, false pregnancy, termination of pregnancy, or recovery therefrom), race, religion, sex, sexual orientation, or protected veteran status, or any other bases under the law, in its activities, academic programs, admission, and employment. Members of the university community also have the right to be free from all forms of sexual misconduct: sexual harassment, sexual assault, relationship violence, stalking, and sexual exploitation.

To report harassment, discrimination, sexual misconduct, or retaliation and/or seek confidential and non-confidential resources and supportive measures, contact the Civil Rights Compliance Office (CRCO):

Online reporting form: <http://civilrights.osu.edu/>

Call 614-247-5838 or TTY 614-688-8605

civilrights@osu.edu

The university is committed to stopping sexual misconduct, preventing its recurrence, eliminating any hostile environment, and remedying its discriminatory effects. All university employees have reporting responsibilities to the Civil Rights Compliance Office to ensure the university can take appropriate action:

- All university employees, except those exempted by legal privilege of confidentiality or expressly identified as a confidential reporter, have an obligation to report incidents of sexual assault immediately.
- The following employees have an obligation to report all other forms of sexual misconduct as soon as practicable but at most within five workdays of becoming aware of

such information: 1. Any human resource professional (HRP); 2. Anyone who supervises faculty, staff, students, or volunteers; 3. Chair/director; and 4. Faculty member.

Copyright

The materials used in connection with this course may be subject to copyright protection and are only for the use of students officially enrolled in the course for the educational purposes associated with the course. Copyright law must be considered before copying, retaining, or disseminating materials outside of the course.

Counseling and Consultation Services / Mental Health Statement

As a student you may experience a range of issues that can cause barriers to learning, such as strained relationships, increased anxiety, alcohol/drug problems, feeling down, difficulty concentrating and/or lack of motivation. These mental health concerns or stressful events may lead to diminished academic performance or reduce a student's ability to participate in daily activities. The Ohio State University offers services to assist you with addressing these and other concerns you may be experiencing.

If you or someone you know are suffering from any of the aforementioned conditions, you can learn more about the broad range of confidential mental health services available on campus via the Office of Student Life's Counseling and Consultation Service (CCS) by visiting ccs.osu.edu or calling 614-292-5766. CCS is located on the 4th floor of the Younkin Success Center and 10th floor of Lincoln Tower. You can reach an on-call counselor when CCS is closed at 614-292-5766 and 24-hour emergency help is also available through the 24/7 by dialing 988 to reach the Suicide and Crisis Lifeline.

Content Warning Language

Some content in this course may involve media that may elicit a traumatic response in some students due to descriptions of and/or scenes depicting acts of violence, acts of war, or sexual violence and its aftermath. If needed, please take care of yourself while watching/reading this material (leaving classroom to take a water/bathroom break, debriefing with a friend, contacting a confidential Sexual Violence Advocate 614-267-7020, or Counseling and Consultation Services at 614-292-5766 and contacting the instructor if needed). Expectations are that we all will be respectful of our classmates while consuming this media and that we will create a safe space for each other. Failure to show respect to each other may result in dismissal from the class.

Military-Connected Students

The [Military and Veterans Services](#) (MVS) Office offers a wide range of resources for military-connected students. Whether using educational benefits or not, all military-connected students are encouraged to learn more about how the university supports military-connected students (i.e., information about tutoring, transition services, access to the veteran's lounge, etc.). For service members, should you receive military orders during the semester or know of classes that will be missed due to service commitments, please speak with your instructor as soon as possible on possible accommodations. MVS contact information: milvets@osu.edu; 614-247-VETS; veterans.osu.edu; 185 Student Academic Services Building, 281 W. Lane Avenue.

Dear John,

We have looked at the syllabus and are happy to grant concurrence. We did not see any significant overlap with our courses including MICRBIOL 5161 (Introduction to Computational Genomics).

Good luck with your proposed course!

Subject: Concurrence request for EEOB

Dear Dr. Ruiz:

Please find attached the syllabus for a new undergraduate course in the Department of Evolution, Ecology and Organismal Biology entitled "Genomics and Bioinformatics".

We are seeking concurrence for the new course. Please respond to me with your **response/concurrence by August 19**. Concurrence will be assumed if no response is received by that date.

Thanks very much,

John Freudenstein

Many thanks John for the clarification.

I discussed this concurrence request with BMI education committee again
- BMI will concur on this new course in EEOB as

- The new course will be at the 3000-level and titled "Evolutionary and Ecological Genomics".
- The course will not teach any programming language.
- EEOB will promote BMI 5730 as a follow-up to the 3000-level course, which is targeted at Sophomores/Juniors.

Have a great week!

Dear Dr. Freudenstein,

MolGen gives its concurrence to the EEOB course "Evolutionary Genomics".

I would like in turn to ask you for concurrence on the recently developed MolGen course 'Genomic data analysis'. It is currently being offered as a Special Topics course but we would like to make it a permanent course. Its syllabus is attached.

I would like to note that while both EEOB and MolGen courses focus on genomics, there are clear differences in their structures, learning goals, and target audiences. While the EEOB 3000-level course is targeted for an introductory student population, with no formal prerequisites and no possibility for graduate credit, the MolGen course is at the 5000 level, requires courses in General or Molecular Genetics as prerequisites, and targets senior undergraduates and/or graduate students. Our course also focuses on hands-on analysis of genomic data with students learning to use command line tools and R scripting languages, while the EEOB course is conceptual.

Please respond to me by **October 31**. Concurrence will be assumed if no response is received by that date. Please let me know if you have any questions.

Thank you,

Anna
